

p_theta(x_s | x_t): reverse_diffusion + langevin corrector, 299 steps, 598 NFE per rollout

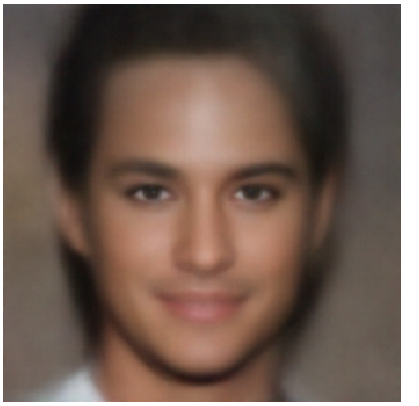

x_0 (validation-00000-of-00001.parquet#row0)

frozen x_t , $t = 0.5998$, $\sigma_t = 5.3$
(forward-noise seed 0)

$E_\theta[x_0 | x_t]$ (Tweedie, 1 NFE)

64 independent stochastic rollouts from the SAME x_t to $s = 0.4502$ ($\sigma_s = 1.11$); raw $x_s^{(j)}$, seeds 1000..1063

the same $x_s^{(j)}$, each shown through $E_\theta[x_0 | x_s^{(j)}]$ (Tweedie, 1 NFE each)
